

# Bad judge of distance?

Say you are a professional floor installer and want to measure a room at a client's house to create an estimate. You wish you could stand in the middle of the room and measure wall to wall... but there's furniture everywhere! There goes your day.

Or say you are a handyman and you want to measure the span between two vents in the ceiling. The ceiling is too high to measure using a measuring tape. What to do?

Introducing the

## PARALLAX™

The Parallax™ takes measurement of the space between two targeted endpoints from a distance. Just point the dual lasers on the two separate ends of the space you want to measure, and VIOLA...you have your distance measurement!

The Parallax™ not only takes pinpoint accurate measurements, but also wants to store this information electronically for future reference.

### Perfect for:

- Floor finishers and installers
- Carpet layers
- Painters
- Landscapers
- Concrete works
